HOW TO BUILD YOUR SHIP

One piece at a time, until it's real.

This workbook gives you the same eight ship parts that are in your Recipe Detectives book, so you can build The Second Helping without cutting up the book.

EVERY TIME YOU FINISH A CASE:

1. Cook the recipe and check it against the Case Check page.
2. Print that case's ship part from this workbook (see the Blueprint page for which one).
3. Cut it out along the dashed line. Ask a grown-up to help with the scissors.
4. Tape it to the pieces you've already collected — edge to edge, with the tape on the back.

BEFORE YOU PRINT

- Print at 100% — choose "Actual size," not "Fit to page." Every part is true to scale with the others.
- Works on US Letter (8.5 × 11) or A4. One part per page, so you only print what you've earned.
- Regular paper is fine. Cardstock makes a sturdier ship.

Scale check: this line should measure 2 inches.

YOU'LL NEED

Scissors · Tape · A grown-up's help with cutting

Optional: a big sheet of poster board to mount your finished ship (about 11 × 15.5 inches).

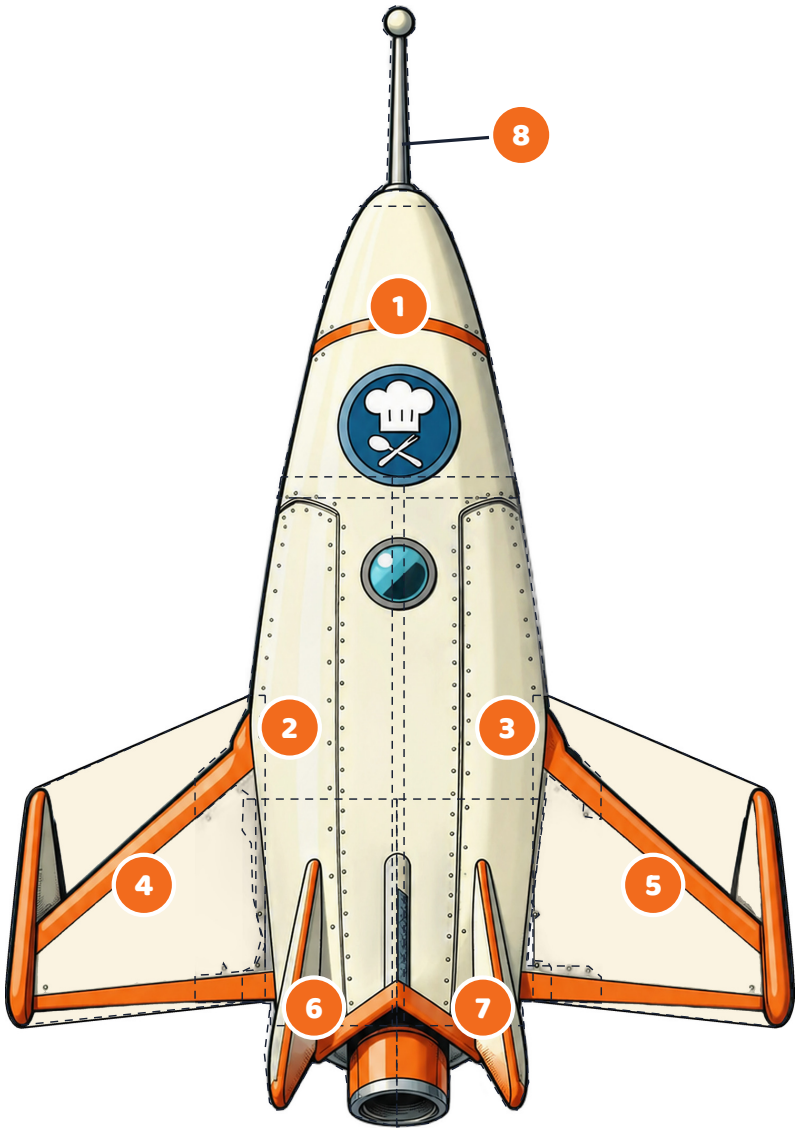

TIP FROM THE CREW

Every part page has a "Where it goes" map in the corner. Build from the nose down: body panels first, then the fins and engines, and the antenna last.
